What is NewsroomGPT?

AI for communicators

NewsroomGPT is an innovative AI solution specifically designed for the requirements of modern communication. Our solution is capable of automatically analyzing, optimizing, and most importantly, abstracting your communication content and topics for various formats.

How does NewsroomGPT work?

You ask - NewsroomGPT answers!

NewsroomGPT uses a combination of deep learning and natural language processing (NLP) to capture your communication content. The integration of revolutionary OpenAI technology makes it easy to capture and automatically optimize the meaning and context of your content. By using machine learning, our algorithm is continuously trained to achieve better results, which in turn helps you achieve more successful publications. A win-win situation!

How can NewsroomGPT support my communication?

The Co-Pilot Principle

NewsroomGPT acts as your content co-pilot and helps you create the appropriate publications from your topics - for all channels and in different tones, factual or emotional. Your content is automatically optimized - both in terms of content and format - for various channels. This generates a higher reach and visibility for your publications on every platform. Of course, NewsroomGPT also automatically suggests headlines, hashtags, subtitles, and teaser texts for your content to reinforce your messages to your target audience. You always remain in control of your topics and your data, because NewsroomGPT operates exclusively in the European cloud. Your data remains your data!

What's holding you back from becoming an innovative pioneer in the field of AI-based communication?
